SUMMARY

Lead Cross Platform Unity Developer with 8+ years of experience shipping mobile games with million+ downloads, VR collaboration tools, and WebGL applications. Specialist in VR-to-WebGL conversion and real-time multiplayer systems, with a track record of leading distributed teams and delivering products that secure publishing deals with established studios. Currently leading 10 developers across 6 concurrent projects at Infinity-Up. Strong in C#, multiplayer networking (Photon, GameLift), and the full mobile publishing pipeline on Google Play and the App Store. Comfortable owning projects end-to-end, from client scoping and architecture to release.

TECHNICAL SKILLS

Game Engine: Unity 3D (Standalone, Android, iOS, WebGL), URP, HDRP, Addressables, Shader Graph

XR & Platform SDKs: Oculus, HTC Vive, Unity AR, Vuforia, Steam

Languages: C#, JavaScript

Multiplayer & Networking: Photon PUN/Fusion, AWS GameLift, Agora, custom Photon server

Cloud & Backend: AWS (EC2, S3), Firebase, PlayFab, GCP

Monetization & Analytics: AdMob, AppLovin, Unity Ads, IronSource, Chartboost, Unity Analytics

Architecture & Practices: Zenject, VContainer, Singleton, Facade, Observer, PubSub, Factory, SOLID, DRY, Agile, Scrum

Tools: Git, JetBrains Rider, Visual Studio, Jira, Asana, Notion, Figma, Azure DevOps CI/CD, Browserstack

EXPERIENCE

Infinity-Up — *Lead Unity Developer* — Nov 2024 – Present

- Lead a team of 10 developers across 3 client projects and 3 in-house games, owning code reviews, progress tracking, hands-on development, and direct client communication.
- Scope product requirements with clients and finalize development roadmaps before kicking off projects, ensuring alignment on scope, timelines, and technical approach.
- Shipped 5 mobile games on Google Play and the App Store: **Galactic Peggle**, **Boat Magnet**, **Crossy Bridge**, **Clucky Chick**, and **Mushroom Spring**.
- **Galactic Peggle** achieved D1/D3/D7 retention rates of 27% / 10% / 8%, securing publishing contracts with Lion Studios, Yodo1, and other established publishers across the US and China.
- Established project architecture and coding standards across the team, keeping codebases clean, scalable, and maintainable as projects grew in complexity. Built multiple tools for in-house use for IAP, notifications, validation etc.

Arkadium — *Senior Unity Developer (Contract, Part-time)* — Apr 2024 – Oct 2025

- Maintained and upgraded million+ downloads mobile titles **Mahjong Solitaire**, **Mahjongg Dimensions**, and **Taptiles** on a contract basis.
- Pushed game updates through the publishing pipeline on Google Play and the App Store consistently ahead of deadlines, earning recognition from senior management for turnaround quality.
- Built the WebGL game **Journey Match** from the ground up, receiving formal commendations for code quality and problem-solving approach. Integrated IAPs and optimization.

- Supported other developers through Unity version migrations, resolving compatibility regressions and performance issues across multiple projects.

Arthur Technologies — *Senior VR Unity Developer* — Mar 2021 – Apr 2024

- Built core modules of **Arthur**, a VR office collaboration platform with a $5M development budget, using Unity, C#, Photon, and AWS. Contributed to high-level product and architectural decisions.
- Led the conversion of the VR application to WebGL ahead of schedule, authoring custom wrappers for services without native WebGL support; the implementation became a reference codebase for the rest of the team.
- Owned performance and memory optimization, delivering stable real-time HD video streaming in VR with no buffering on connections as low as 5 Mbps — a critical capability for the product's enterprise rollout.
- Gained deep AWS experience integrating EC2, S3, and supporting cloud services into the deployment pipeline.

No Borders Innovations — *Senior Game Developer* — Nov 2020 – Mar 2021

- Managed a team of 4 across the **Xana** metaverse platform and *Xana Live* streaming app, introducing improved QA processes that reduced wasted development cycles.
- Integrated Agora for real-time video and communication, and AWS GameLift for custom server infrastructure. Authored an internal handbook to prevent recurring technical issues across the team.
- Shipped both products on schedule and received the highest performance rating that review cycle.

Five Rivers Technologies — *Unity Developer → Senior Unity Developer* — Apr 2018 – Oct 2020

- Promoted to Senior within the first year. Contributed to VR applications for HTC Vive and took on a lead role within a 12-person team.
- Delivered 10 products that management credited with contributing to the company's annual revenue turnaround.
- Wrote production gameplay code in C# and onboarded new hires through code reviews, walkthroughs, and pair programming sessions.

Earlier: Unity Game Developer at Nutty Apps (2017 – 2018) | Unity Developer Intern at Zepro Digital (2016 – 2017)

NOTABLE PROJECTS

- **Gods of Chess —** Designed and implemented a custom Photon server that reduced multiplayer latency and bypassed standard API limitations.
- **Claw Arena & Tap Challenge —** Owned all front-end work, PlayFab cloud integration, and the Firebase player/challenges database.
- **Pet Idle Miner —** Solo project. Designed the full game economy and visuals from scratch; secured publisher interest from Lion Studios, Yodo1 and others.
- **Galactic Peggle —** Led the team and built a game that was approached by renowned publishers and achieved good retention rates at D1, D3, and D7..

EDUCATION

BS Computer Sciences — Government College University, Lahore (2017)
